

The Overall Effects of Self-Driving Cars

Luke Thornsberry, Cleveland State University

Abstract

Talking to the people around me- family, peers, and professional associates- I came to realize that the idea of self-driving cars in the future of our society is more controversial than I first believed. Many people are all for cars that will drive themselves, after all -or so I have heard- there will be no more human error in driving, no more careless accidents and lives lost. Yet, there are still others that are hesitant to allow machines to take them where they need to go. They seemed to fear a malfunction that they could not control, or the lack of control in general, so I decided to do some research on the topic. After all, I really did not know how plausible any of these situations were. I started researching both the potential benefits and costs of owning a self-driving car, and overall, it appeared to be more advantageous to own one. The only large disadvantage of a self-driving vehicle seemed to be the potential six
